
With the increasing global energy and environmental issues, the sustainable development of renewable energy and ecosystems has become a hot topic and an important issue worldwide. 2023 International Conference on Renewable Energy and Ecosystem (ICREE 2023), held in Beijing, China from July 28 to 30, 2023, aims to promote research and development in the field of renewable energy and ecosystems, bringing together scholars, engineers, and industry experts from different countries and regions across various disciplines, including environmental science, engineering, ecology, energy science, and more. The scope of ICREE 2023 includes but are not limited to the development, utilization, and management of renewable energy such as solar, wind, biomass, geothermal, and ocean energy, the protection, restoration, and sustainable development of ecosystems, environmental pollution control, waste disposal, and resource recovery, as well as relevant policies, economic and social factors.

The conference has 4 keynote speeches and 3 invited speeches in total, and it has drawn about 160 delegates from 9 countries (China, India, Canada, UK, India, Singapore, Malaysia, Thailand, South Africa). The conference comprised a diverse spectrum of highly technical presentations by keynote and invited speaker sessions and authors of submitted papers.

We expect this conference would encourage future renewable energy and ecosystem research. We look forward to seeing all of you at the next ICREE.
